CURRENT CATALOG DESCRIPTION:

A hands-on course taught in a computer classroom in UNIX operating system management and networking. The design, building, management, security and technical issues involved in a local area network will be covered.

PROPOSED CATALOG DESCRIPTION (Approximately 75 words in length. Please use full sentences): leave blank if no changes are being proposed to the catalog description. NOTE: information about prerequisites should NOT appear in the catalog description.)

RATIONALE FOR CHANGE:

The course material requires knowledge of computer networking from IS 450, but not from the current corequisite, IS 451. Currently, students on the IS 451 waitlist are unable to register for IS 451U, resulting in unnecessary scheduling difficulties for the students.
