**CURRENT CATALOG DESCRIPTION:**

Designed to emphasize cellular, molecular and biochemical aspects of basic developmental questions, this course introduces the student to modern approaches to determination, differentiation and morpho-genesis. Experimental design and analysis of data are emphasized. Possible topics include molecular and cellular aspects of gametogenesis, fertilization, embryogenesis and continuous development in the adult; mechanisms of intra- and intercellular communication; and pattern formation and positional information. Developmental model systems using unicellular organisms are considered. This course is repeatable for credit.

**PROPOSED CATALOG DESCRIPTION** (no longer than 75 words): leave blank if no changes are being proposed to the catalog description. NOTE: information about prerequisites should NOT appear in the catalog description.)

**RATIONALE FOR CHANGE:**

“The BIOL core courses are in a sequence BIOL 141-> BIOL 142 -> BIOL 302 -> BIOL 303, with BIOL 303 serving as a capstone course for the Biology core. The curriculum was designed such that only after completing this course and showing mastery of the core course content, would students move on in the major and take 400 level courses. However, we have a number of 400 level courses offered that do not explicitly require the content of BIOL 303 for student success in the course and therefore do not currently have it listed as an academic prerequisite. Some students have been taking

these courses before completing BIOL 303 and the core, and some of these students have gone on to fail BIOL 303 two times, showing that they do not have mastery of the material and perhaps should be in another major. We would like to make BIOL 303 a prerequisite for all of our 400 level courses, regardless of content, to make this maneuver impossible. We prefer students to show they should be in the major before taking these upper level courses.”
